Update user schema:

 I have update my user scheme. Add wishlist variable which takes product as a reference.

Create routes:

Then in backend productRoutes.js file I have created routes to view, add and delete wishlist.

How it works:

It checks if wishlist is created then add products otherwise create new wishlist.

Integrate frontend:

Then I integrated the frontend with the backend in productDetails.ejs file create Add to wishlish button. While to view wishlist create new page
